

1C:ENTERPRISE 8 BUSINESS AUTOMATION SOFTWARE

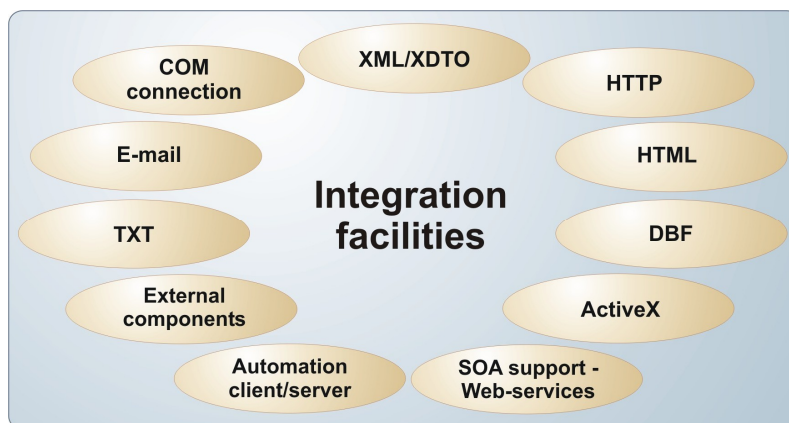

1C:Enterprise 8 is a progressive software system intended for automation of small and medium companies, as well as business-units of large enterprises, operating in various spheres and branches: manufacturing and trade, service and financial companies, non-commercial organizations, etc.

1C:Enterprise 8 software system consists of two parts: 1C:Enterprise 8 framework and applied solutions. Providing a complete set of flexibly configured business components, the framework is used as an integrated environment for development, support and execution of business applications.

Such architecture approach with a separated software platform and business applications has permitted the establishment of an entire industry for development, distribution and support of the most varied business applications, focusing on specific business tasks and abstracting from low-level technological details.

The framework provides:

- Integrated Rapid Application Development (RAD) tools, providing comprehensive industrial business applications maintenance.
- Modern three-tier architecture: client application, server cluster and database server. Database server and server cluster can operate on Windows and Linux OS.
- MS SQL, and PostgreSQL database support for database server.
- Business-task oriented native script language – for programming application business logic.
- Scalability – the framework can operate on a standalone PC; on a LAN in file-server version; in three-tier architecture with a database server; supports distributed information bases.
- Reporting engine with Data Composition System – for smart creation of user reports using only declarative description, without programming; allows creation and customization of representative reports having complex structure, including arbitrary number of spreadsheets, diagrams, charts, geographic charts, data analysis and prognosis, etc.

- Rich integration tools, including various XML technologies.
- SOA support: interaction with third-party Web-services, as well as publishing own Web-services.
- Administration tools.
- Developed, business-oriented and user-friendly interface.
- Web-extension – provides access to business application functionality over Internet, for mobile users.

- Industrial approach to business applications support.
- Integrated localization tools for creation of multilingual business applications for different countries, in accordance with their legislation and language.
- More other features.

Developed localization support tools provide the capability of developing business applications for other countries, as well as creation of multi-lingual business applications. Currently the framework supports English, Bulgarian, German, Georgian, Kazakh, Latvian, Lithuanian, Romanian, Russian, Ukrainian and Vietnamese interface languages.

Meeting real business needs, 1C:Enterprise 8 framework is used for building business applications offering functionality for CRM, SRM, SCM, trade management, warehouse management, business and tax accounting, business and budget planning, payroll calculation, HRM, production management, etc.

Thanks to the great flexibility and scalability of 1C:Enterprise 8 framework, business applications are currently used at more than 800 000 of small, medium companies and large enterprises.

In CIS 1C offers various business applications, such as:

- 1C:Accounting 8
- Payroll & HR
- Trade Management
- Manufacturing Enterprise Management
- 1C:Consolidation (consolidation and reporting solution)

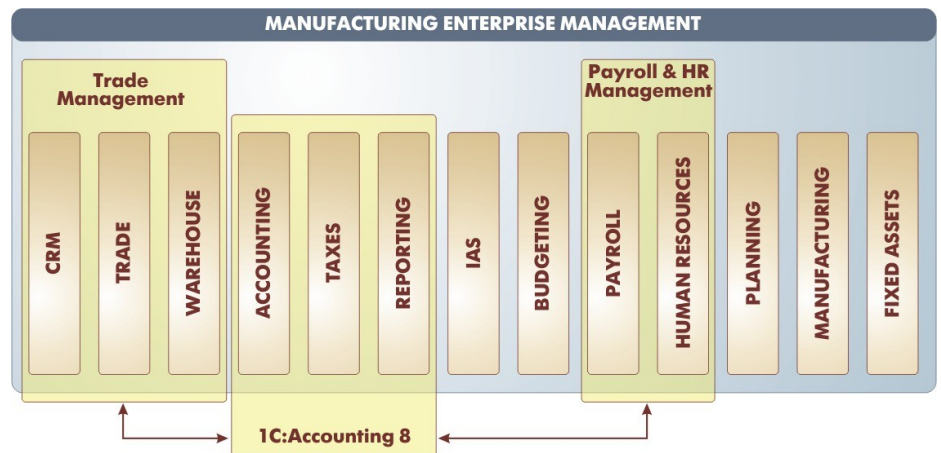

One of the most popular business applications is 1C:Accounting 8, which has become an industrial standard in automated business accounting in CIS.

Business applications from 1C include accounting business logic developed in close cooperation with PricewaterhouseCoopers Company and provide methodological basis for establishing accounting according to International Accounting Standards (IAS).

The modern international methods of enterprise management (MRP, SCM, ERP), internationalization support and integrated localization methods used in 1C:Enterprise 8 software allow to develop and promote the software in other countries, meeting local legislation. Now there are regional business applications in Azerbaijan, Armenia, Baltic States, Byelorussia, Bulgaria, Georgia, Kazakhstan, Kirghizstan, Moldova, Romania, Russia, Ukraine, Uzbekistan and Vietnam.

On the base of 1C:Enterprise 8 framework our partners, independent developers and system integrators, as well as the customers themselves develop diverse business applications.

There are over 950 business applications for various industries and countries developed on the framework by more than 320 development companies, that have earned '1C:Compatible!' logo. They are used in such industries as armed forces, transportation, public health, educational institutions, agriculture, public catering, insurance industry, non-profit organizations, manufacturing, tourism industry, service industry, civil construction, real estate companies etc.
